L. PUNCTION: The UVABC repair system catalyzes the recognition and

processing of DNA lesions. UvrA is an AfPase and a DNA-binding

processing of DNA lesions. UvrA is an AfPase and a DNA-binding

processing of DNA lesions. UvrA is an AfPase and a DNA-binding

processing of DNA lesions. UvrA is an AfPase and a CurrA and 2

protein. A damage recognition complex composed of 2 uvrA and 2

protein. A damage recognition complex composed of 2 uvrA and 2

UvrB subunits scans DNA for abnormalities. When the presence of a

lesion has been verified by uvrB, the uvrA molecules dissociate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (By similarity). Subunity and the search for Subunit; Forms a heterotetramer with uvrB during the search for lesions (By similarity). SubcEllULAR LOCATION: Cytoplasmic (By similarity). SIMCELULAR LOCATION: Cytoplasmic (By similarity). SIMILARITY: Belongs to the ABC transporter family. UvrA subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PROSITE; PS00211; ABC_TRANSPORTER 1; 2.

PATHWAY: Light-independent bacteriochlorophyll biosynthesis.
SIMILARITY: Belongs to the Mg-chelatase subunit H family.
                                                                                                                                                                                                                                         Rhodobacter sphaeroides (Rhodopseudomonas sphaeroides).
Bacteria; Proteobacteria; Alphaproteobacteria; Rhodobacterales;
Rhodobacteraceae; Rhodobacter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                . 9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            "Genome sequence of Yersinia pestis KIM.";
J. Bacteriol. 184:4601-4611(2002).
-!- FUNCTION: Catalyzes the synthesis of activated sulfate.
-!- CATALYTIC ACTIVITY: ATP + adenylylsulfate = ADP + 3'-
phosphoadenylylsulfate.
-!- PATHWAY: Sulfate activation; cysteine biosynthesis reductive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .

New polypeptide ligand for orphan G protein coupled receptors - used for treating disorders of central nervous system, pituitary and pancreas, and The invention relates to a murine pituitary-derived ligand polypeptide which is a ligand for the G-protein coupled orphan receptor designated GPR10 (human) or URR-1 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant ligand polypeptide. The ligand polypeptide, and its fragments, modulate function of the pituitary, central nervous system, pancreas and other tissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a sample and to raise antibodies. They may also be used therapeutically, Disclosure; Page 26; 206pp; English. drug screening.

This represents the matured murine pituitary-derived ligand polypeptide sequence. The polypeptide is a ligand for the G-protein coupled orphan receptor designated GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant ligand polypeptide. The ligand polypeptide, and its fragments, modulate function of the pituitary, central nervous system, pancreas and other tissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the

drug screening

ö e.g. to treat semile dementia, Alzheimer's, Parkinson's or Huntington's diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; diabetes; schizophrenia, disorders of growth hormone secretion; cancer; rheumatoid arthritis, epilepsy and many others, also to improve postoperative nutritional status and as vasopressor. Transgenic animals carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide-expressing genes, as models of disease, for drug screening and as source of cell lines. The ligand polypeptide DNA is used as a source of probes and primers; to identify related sequences; in receptor-binding assays; for production of Ab and antiseas, in drug development; for gene therapy and to develop transgenic animals. Sequences AAW95174 to AAW95178 represent antigenic epictpes which can be used for the preparation of anti-ligand polypeptide antibody Pituitary-derived ligand polypeptide; G-protein coupled orphan receptor; GPR10; UHR-1; modulator; pituitary; central nervous system; pancreas; tissue; soreen; therapeutic; binding; senile dementia; ligand; murine; Alzheimer's disease; Parkinson's disease; Huntington's disease; drug; Creutzfeld-Jakob disease; poisoning; schizophrenia; growth hormone; secretion; diabetes; cancer; rheumatoid arthritis; epilepsy; vasopressor; New polypeptide ligand for orphan G protein coupled receptors - used for treating disorders of central nervous system, pituitary and pancreas, and Gaps ó, Murine pituitary-derived ligand mature polypeptide sequence. ```

This is the amino acid sequence of the rat pituitary G protein-coupled receptor ligand 1992L. A method suitable for commercial high-level production of 1992L comprises expressing the ligand in host cells as a recombinant fusion protein e.g. with human basic fibroblast growth factor (see AAV87794-95) that has been modified to include an N-terminal cysteine residue. The ligand is released from the fusion by cyanylation followed by ammonolysis. 1992L has prolactin secretion-stimulating and clar high doses) prolactin secretion-inhibiting properties. It can be used dementia, crebrovascular dementia, and dementia associated with: mile per applicat disorders (e.g. Alzheimer's disease, Parkinson's disease, Pick's disease, Huntington's disease, printington's disease, Creutzfeldt-Jakob's), endocrine or metabolic disease or toxicosis (e.g.

hypothyroidism, vitamin B12 deficiency, alcoholism, intoxication by drugs, metal and organic compounds) tumourigenic diseases (e.g. brain cutmour), traumatic diseases (e.g. chronic subarachonidal heamorrhage, and other types of dementia, depression, hyperactive child syndrome (microencephalopathy) and disturbance of consciousness. It is also useful for prevention and treatment of diseases associated with prolactin hypo and hypersecretion respectively, including: hyperprolactinaemia, pituitary adenoma, breast cancer, infertility, impotence and autoimmune disease (hypersecretion disorders), and seminal vesicle hypoplasia, osteoporosis, menopausal syndrome and renal failure (hyposecretion disorders) and seminal as a test reagent for study of the prolactin secretory function or as a lactogogue in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a rat type ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Rat type ligand, modulation, prolactin secretion; genecyst cacogenesis; menopausal syndrome; euchyroid; hypometabolism; lactation; pitultary adenomatosis, brain tumour; emmeniopathy; autoimmune disease; prolactinoms; infertility; impotence; amenorrhea; galactorrhea; acromegaly; Chiari-Frommel syndrome; Argonz-del Castilo syndrome; Porbes-Albright syndrome; lymphoma; Sheehan syndrome; dyszoospermia; contraceptive; placental function; choriocarcinoma; hydatid mole; irruption mole; abortion; unthrifty fetus; abnormal saccharometabolism; abnormal lipidmetabolism; oxytocia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Use of G protein-coupled receptor ligands - for modulating prolactin secretion or placental function, e.g. for treating menopausal syndrome, tumours, autoimmune disease or abnormal pregnancy.
                                                                                                                                                                                                                                                                                                                                                                       ;

hypocovarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactinoma, infertility, imporence, amenorthea, galactorrhea, acromegaly, Chiari-Frommel syndrome, Argonz-del Castilo Syndrome, Forbes-Albright syndrome, lymphoma, Sheehan syndrome or dyscoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choricoarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAV49290-302 represent peptide fragments of the 19P2 ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 useful in diagnosis, as drugs and in studying

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method for identifying compounds useful for modulating body weight. The method comprises cell-free and/or cell-based assays that identify compounds which bind to and/or activate or inhibit then activity of GPR10, a G protein-coupled receptor. These assays are then followed by an in vivo assay of the effect of the compound on feeding behaviour, body weight or metabolic rate in a mammal. Prolactinrelasing peptide (PFRP, AAY87504) is a ligand of GPR10. Binding of PFRP to GPR10 stimulates a signal transduction cascade, which results in an increase in food intake. Compounds identified using the method of the invention are useful for the modulation of body weight. Antagonists of GPR10 can be used to treat obesity, while GPR10 agonists can be used to treat cachexia. The present sequence represents rat PFRP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Identifying modulators of body weight by a combination of a cell-free or cell-based assay to identify modulators of GPR10, followed by an in vivo assay for the compounds effect on e.g. feeding behavior.
                                                                                                                                                                                                                                                                                                            Prolactin-releasing peptide; PrRP; GPR10; G protein-coupled receptor; feeding behaviour; food intake; modulation; antagonist; anorectic; obesity; agonist; cachexia.

                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a rat peptide which acts as an oxytocin secretion
                                                                                                                                               COW;
                                                                                                                                                                                                                                                                                                                                                                     Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary medicine.
                                                                                                                               Rat; oxytocin secretion promoter; G protein-coupled receptor protein; treatment; disease; pain; atonic bleeding; uterine recovery failure; or caesarean section; artificial fertilization; galactostasis; goat; pig; veterinary medicine; milk production.

The present invention describes a modified therapeutic peptide (I)

comprising a therapeutically active amino acid region (III) and a

reactive group (II) (e.g. succinimidyl and maleimido groups) attached to

a less therapeutically active amino acid region (IV), which covalently

bonds with amino/Nydroxyl/thiol groups on blood components to form a

comprision of the reactive operation of 3-50 amino acids.

(I) are useful for modifying therapeutic peptides e.g. hormones, growth

control freatment of various disorders. Endogenous therapeutic

cytvo for the treatment of various disorders. Endogenous therapeutic

cytvo for the treatment of various disorders. Endogenous therapeutic

cytvo for the treatment of active and and adders as they require frequent

control from a traching therapeutic peptides of allowing prevents or

condition and attaching therapeutic peptides to albumin prevents or

creduces the action of peptideses to increase length of activity (half

condition and specificity as bonding to large molecules decreases

The present invention relates to a method of screening for compounds for promoting wakefulness or sleep in a mammal. The method involves administering a prolatcin releasing peptide (PrRP) receptor (CPR10) agonist or antagonist respectively and determining the ability of the compound to promote wakefulness or sleep. The compounds identified from the method are used in the therapy of epilepsy and other diseases associated with absence seizuress and in promoting wakefulness and sleep in individuals having sleep disorders such as insomnia and narcolepsy. PrRP receptor agonists may be used to treat common disorders which lead psychogenic hypersomnia. PrRP receptor antagonists are useful for promoting sleep and for treating insomnia such as adjustment sleep and siscered and psychophysiologic insomnia. The present sequence is rat prRP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a method of producing a peptide comprising the excision of the N and C-terminals of a target peptide with enzymes or chemically through the attached cleavage sites repeated by ligation in a precursor protein. The method is for producing (low-molecular) peptides e.g. KiSS-1 peptide and GPR8 ligand for subsequent applications by the gene recombination technique through tandem repeats to provide a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Process for producing peptides e.g. KiSS-1 peptide and GPR8 ligand for subsequent applications by gene recombination technique through tandem repeats to provide precursor protein with specific cleavage sites.
for treating sleeping disorders, e.g. insomnia, hypersomnia or sleep apnea, comprises administering a prolactin releasing peptide agonist antagonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Peptide production by gene recombination associated peptide #10.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Peptide production, low-molecular peptide, KiSS-1, GPR8 ligand, gene recombination.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes a method of producing a peptide comprising the excision of the N and C-terminals of a trarget peptide with enzymes or chemically through the attached cleavage sites repeated by ligation in a precursor protein. The method is for producing (low-molecular) peptides of St. 1 peptide and GPRS ligand for subsequent applications by the gene recombination technique through tandem repeats to provide a precursor protein with specific cleavage sites. With this method, peptide production can be carried out easily to provide large quantities of the required peptides. This is the amino acid sequence of a peptide associated with the peptide production method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Process for producing peptides e.g. KiSS-1 peptide and GPR8 ligand for subsequent applications by gene recombination technique through tandem repeats to provide precursor protein with specific cleavage sites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                   Gaps

This sequence represents a peptide fragment from a novel rat type ligand polypeptide corresponding to amino acid residues 22 to 53 of the sequence represented in AAW11383 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituiery function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone serestory disease, hyper and polyphagia, hyperlipidaemia, diabetes, hypercholesterolaemia, hyperchylveridaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, Turner's syndrome, neurosis, asthma, concerpendia clateral schemaia, hyperprolactinaemia, epilepsy, amylotrophic lateral schemaia, proceedia in julyy, transient brain ischaemia, epilepsy, amylotrophic lateral schemaia, bone fracture, trauma, atopic dermatitis, consciousnes and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the lighdated on 27-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .

This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of futuse for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a rat peptide which acts as an oxytocin secretion
                                                                                                                                                              Rat; oxytocin secretion promoter; G protein-coupled receptor protein; treatment; disease; pain; atonic bleeding; uterine recovery failure; cow; caesarean section; artificial fertilization; galactostasis; goat; pig; veterinary medicine; milk production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary medicine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 14, Application US/09932161
Patent No. US20020037533A1
Patent No. US20020037533A1
GENERAL INFORMATION:
APPLICANT: Lin, Steven
APPLICANT: Lin, Steven
TITLE OF INVENTION: Premeing and Therapeutic Methods For TITLE OF INVENTION: Premeing Makefulness and Sleep
FILE REFERENCE: P-UC 4679
CURRENT FELLIG DATE: 2001-08-17
PRIOR PILING DATE: 2000-04-28
NUMBER OF SEQ ID NOS: 24
SOFTWARE: FastSEQ for Windows Version 4.0

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                        August 12, 2004, 14:37:36; Search time 17.6628 Seconds (without alignments) 90.609 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 47, Sequence 8, Ap

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

P71015

hypochetical protein PH1420 - Pyrococcus horikoshii

C; Species: Pyrococcus horikoshi
C; Species: Pyrococcus horikoshii
C; Date: 14-Aug-1998 #sequence_revision 14-Aug-1998 #text_change 20-Jun-2000
C; Accession: P71015

hypothetical protein Rv0428c - Mycobacterium tuberculosis (strain H37RV)
C.Species: Mycobacterium tuberculosis
C.Accession: B76631
R.Cole, S.T.; Brosch, R.; Parkhill, J.; Garnier, T.; Churcher, C.; Harris, D.; Gordon, S.; Connor, R.; Davies, R.; Parkhill, J.; Garnier, T.; Ghurcher, C.; Harris, D.; Gordon, S.; Connor, R.; Davies, R.; Parkhill, J.; Seger, K.; Skelton, S.; Aguares, S.

Mature 393:272-276(1998).

-! FUNCTION: Stimulates prolactin (PRL) release and regulates the expression of prolactin hrough its receptor GPR10. May stimulate lactorophs directly to secrete PRL.

-! TISSUE SPECIFICITY: Medulla oblongata and hypothalamus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

T. The structure of genes encoding light-harvesting and reaction
center proteins from Chromatium vincsum.",
T. Submitted (MAR-1998) to the FWEL/GenBank/DDB databases.
C. --- FUNCTION: THE REACTION CENTER OF PURPLE BACTERIA CONTAIN A
TIGHTY BOUND CYTOCHROME MOLECULE WHICH RE-REDUCES THE PHOTO
OXIDIZED PRIMARY ELECTRON DONOR.
C.--- SUBCELLULAR LOCATION: Attached to the membrane by a lipid anchor
(By similarity).
C.--- PTW: Binds 4 heme groups per molecule.
C.--- PTM: Binds 4 heme groups per molecule.
C.--- SIMILARITY: HIGH, WITH OTHER PHOTOSYNTHETIC REACTION CENTER
CYTOCHROME C SUBUNITS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PHOTOSYNTHETIC REACTION CENTER CYTOCHROME C SUBUNIT.

-!- FUNCTION: Bidirectionally degrades single-stranded DNA into large acid-insoluble oligonucleotides, which are then degraded further into small acid-soluble oligonucleotides (By similarity).

-!- CATALYTIC ACTIVITY: Exonucleolytic cleavage in either 5'- to 3'- or 3'- to 5'-direction to yield nucleoside 5'-phosphates.

-!- SUBUNIT: Heterooligomer composed of large and small subunits (By

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ZU-FEB-2003 (Rel. 41, Last sequence update)
10-OCT-2003 (Rel. 42, Last annotation update)
N-acetyl-gamma-glutamyl-phosphate reductase (EC 1.2.1.38) (AGPR) (N-acetyl-glutamate semialdehyde dehydrogenase) (NAGSA dehydrogenase).
ARGC OR BH2900.
                            FUNCTION: Catalyzes the formation of the alpha-1,6-glucosidic
linkages in glycogen by scission of a 1,4-alpha-11,8ked
oligosaccharide from growing alpha-1,4-glucan chains and the
subsequent attachment of the oligosaccharide to the alpha-1,6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  [1] SEQUENCE FROM N.A.                                        5-semialdehyde + NADP(+)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
Nucleic Acids Res. 28:4317-4331(2000).
-!- CATALYTIC ACTIVITY: N-acetyl-L-glutamate 5-semialdehyde + NADP(+)
+ phosphate = N-acetyl-5-glutamyl phosphate + NADPH.
-!- PATHWAY: Arginine biosynthesis; thins step.
-!- PATHWAY: LOCATION: Cytoplasmic (Probable).
-!- SUBCELLULAR LOCATION: Cytoplasmic (Probable).
-!- SIMILARITY: Belongs to the NAGSA dehydrogenase family. Subfamily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  BMBL, AP001517; BAB06619.1; -.
